COURSE DESCRIPTION:
Provides a basic knowledge of the genetic, physical, chemical, and biological properties of soils. Explores principles involved in the interpretation of soils information for land use management, (including agricultural production and non-agricultural uses), and conservation. Includes a weekly laboratory activity.

COURSE OBJECTIVES:
Upon satisfactory completion of the course, students will be able to
1. analyze local soil quality as affected by human and natural activities.
2. explain local geographical features and their relationship to local soils.
3. evaluate parent rocks and other soil forming processes influence on local and global soils.
4. demonstrate the determination of the following soil physical properties: texture (two methods), use of textural triangle, bulk density, particle density, pore space, organic content, color, pH, structure, conductivity and reactivity.
5. demonstrate an understanding of the classification of local and global soil orders (i.e., soil taxonomy).
6. discuss and understand the importance of essential plant nutrients.
7. apply soil nutrient cycles to soil, plant, and soil organism relationships.
8. demonstrate an ability to use appropriate terminology professionally when discussing soils.
9. demonstrate practical soil management including soil conservation and sustainability.
10. analyze a soil’s microbiological activity level.
11. demonstrate an understanding of a soil food web.
12. describe the features of a soil profile and relate such to soil management practices.
13. demonstrate how to read a soil map, explain the importance of soil mapping and how to locate a specific site using both township/range and GIS (Geographic Information Systems).
14. demonstrate how to determine a Soil Storie Index Rating and a Natural Resources Conservation Service land capability class.
15. describe the organic breakdown cycle of a soil and the role of organisms in soil physical and chemical properties.
16. evaluate a soil’s water holding capacity, plant available water, properties and movement of water in soil.
17. assess and evaluate the anion and cation exchange capacity for a given soil.
18. interpret a soil nutrient analysis including percent base saturation.
19. demonstrate the use of the scientific method when validating and/or experimenting on the principles of soil science.

**COURSE CONTENT:**

I. The importance of soil
   A. Function of soils in our ecosystem
   B. Early agrarian societies and their soil management practices, including significant historical events
   C. The soil as a natural body, an overview of its features and functions
   D. The scientific aspects of soil science, applied research present and future

II. Formation of soils from parent materials
   A. Parent rocks and their influence on soil
   B. Factors influencing soil formation
   C. Soil formation in action

III. Soil classification
   A. Soil orders
   B. Categories and nomenclature of soil taxonomy
   C. Soil series and textural classes
   D. Storie index and land capability classes

IV. Soil physical properties
   A. Texture
   B. Structure
   C. Color
   D. pH
E. Profile  
F. Bulk density  
G. Particle density  
H. Pore space  
I. Soil management as applied to physical properties  

V. Interpretation and use of soil maps  
A. Remote sensing tools for soil investigations  
B. Satellite imagery  
C. County soil survey reports and their utilization  
D. Geographic Information Systems (GIS)  

VI. Organic material and microbiology of soils  
A. Influence of organic material in the soil complex  
B. Composting  
C. Diversity of soil organisms  
D. Influence of soil microorganisms  
E. The soil environment and organisms and organic matter  
F. Soil nutrient cycles  
G. Concept of a sustainable soil system  

VII. Soil moisture  
A. The hydrological cycle  
B. The soil plant atmosphere continuum  
C. Relation to texture, structure, and organic material in the soil  
D. Retention and movement in the soil  
E. Soil drainage  
F. Irrigation requirements and practices in relation to soil  
G. Water quality influence and assessment  
H. Water conservation applications  
I. Soil colloids  
J. Properties and type of colloids  
K. Genesis of soil colloids  
L. Cation exchange capacity  
M. Factors influencing the availability of micronutrient cations and anions  
N. Soil analysis  

VIII. Soil pH  
A. Assessment  
B. Management of acidic soils  
C. Management and reclamation of saline-alkaline soils  
D. Global soil quality as affected by human activities  

LAB CONTENT:  

I. Rocks & Minerals in Soil Formation  
A. Elements and minerals  
B. Hardness scale  

II. Mechanical Analysis  
A. Soil texture  
B. Hydrometer usage and specific gravity  
C. Calculating percent sand, silt, and clay  

III. Determining Soil Texture by Feel  
A. Soil sampling  
B. Sample preparation  
C. Ribboning soil  
D. Texture determination
IV. Soil Properties Related to Texture
   A. Bulk density
   B. Particle density
   C. Porosity
   D. Macropores vs micropores

V. Soil Moisture
   A. Percent moisture
   B. Water fractions
      1. Field capacity and capillary water
      2. Available water
      3. Hygroscopic water

VI. Field Study of Local Soils
   A. Soil formation
   B. Landscape position
   C. Soil horizons

VII. Chemical Soil Analysis: pH and ECE
   A. Measuring pH
   B. Adjusting pH
   C. Salt content and ECE

VIII. Chemical Soil Analysis: N, P & K
   A. Soil sampling
   B. Chemical analysis of primary macronutrients
   C. Total nutrient content vs available nutrients

IX. Fertilizer Materials
   A. Organic vs inorganic fertilizer sources
   B. Fertilizer composition
   C. Fertilizer forms
   D. Fillers

X. Fertilizer Recommendations
   A. Calculating recommendations
   B. Cost analyses
   C. Fertilizer mixtures

XI. Soil Organism Study
   A. Soil sampling
   B. Soil organisms
      1. Bacteria
      2. Actinomycetes
      3. Fungi
      4. Arthropods
      5. Nematodes
      6. Other
   C. Estimating soil organism populations

XII. Soil Organic Matter & Humus
   A. Measuring organic matter content
      1. Muffle furnace method
      2. NaOH method
   B. Impact of organic matter
      1. Soil structure
      2. CEC
      3. Nutrient availability

XIII. Decomposers in the Soil
   A. Comparison of decomposition rates among various decomposing materials
   B. Comparison of decomposition rates between clay and sandy soils

XIV. Soil Conservation & Mapping
Course Outline

A. Soil surveys and the Web Soil Survey
B. Map units
C. Soil capability classes

XV. Land Measurement & Legal Description
A. Township and range and the PLSS System
B. Longitude and latitude
C. Meets and bounds system
D. GPS technology

INSTRUCTIONAL METHODOLOGY:
Lecture
Lab Activity
Individual Assistance
Audiovisual (including PowerPoint or other multimedia)
Demonstration
Discussion
Group Activity
Requires a minimum of three (3) hours of work per unit including class time and homework.

METHODS OF EVALUATING OBJECTIVES OR OUTCOMES:
Methods of evaluation to determine if students have met objectives may include, but are not limited to the following:

CLASSROOM EXPLANATION
Class Activity Students prepare for and participate in class discussions.
Lab Activity Students complete weekly lab activity, determine test results and answer related questions.
Written Assignments Completion of lab questions and text assignments.

EXAMS EXPLANATION
Comprehensive Final Multiple choice and written answers.
Problem Solving Determining conclusions from several of the lab activity.
Skill Demonstration Demonstrate the use of soil testing equipment.
Objective Test Multiple choice and written answers.

MINIMUM STUDENT MATERIALS:
Textbook(s) similar to:

COURSE ASSIGNMENTS
Examples of Reading Assignments

Students will complete reading assignments in the required text (approx 25-50 pages per week).

Soils Science Laboratory Manual
Students will complete reading assignments in the laboratory manual (approx 5-10 pages per week).

Various internet articles will be assigned as appropriate.

**Examples of Writing Assignments**
Students will complete weekly short writing assignments related to the laboratory topics.

**Examples of Outside Assignments**
Students will be assigned follow-up questions each week related to the laboratory exercise.

Students will be assigned specific tasks to complete on the Web Soil Survey application, Natural Resources Conservation Service.
